THE IDEA

# A target set together. A method to reach it.

Target means aiming true. A builder that sets a clear target with its client (the scope, the drawings, the budget, the programme) then works to it with method, joint by joint, like the fitted slabs of its mark.

We set the target with you: the scope, the drawings, the budget, the programme. We put it in writing. Then we build to it, joint by joint, and tell you at every stage where your building stands.

What is written is set out.
What is set out is built.

# A clear target.
# A method to reach it.

Target Construction is a building and civil engineering company. Based in Europe, it works across Europe, Africa and the Middle East.

Structural work is our original trade. Reinforced concrete, stone masonry, concrete blocks, brick: we build, extend, raise, rehabilitate and renovate private and public buildings.

With our own resources for studies, design and construction, and a network of trusted partner firms, we offer an all-trades, turnkey service, with one point of contact for the whole operation.

In civil engineering, our crews carry out earthworks, drainage, roads, utility networks and asbestos removal, with our in-house design office. Qualified staff, a complete equipment fleet and regular training, including safety training, complete the picture.

VISION

# Precision as the rule on site.

We want precision to be the rule on a building site, not the exception: a target written down at the start, a building that matches it at the end, and in between, a client who always knows where things stand.

That is the idea behind our mark: separate pieces, each in its place, forming a single building.

MISSION

## From the first drawing to handover.

To build, refurbish and renovate buildings by setting a clear target with our clients, then working to it with method, safely and to the standards of the trade.

OUR WORKING COMMITMENTS

| | |
|---|---|
| 01 | Write the target down before we start: scope, drawings, budget, programme. |
| 02 | Give every project one project manager, your contact from start to finish. |
| 03 | Report progress at every stage, including when something goes wrong. |
| 04 | Put safety before speed, on every site. |
| 05 | Walk the finished building with you and clear every snag, as French law's one-year completion warranty requires. |

# Six values. Visible on site.

They describe how we work. You can check them on site, not on a poster.

01

## Precision

What is written is set out; what is set out is built.

02

## Method

Every site follows the same order: prepare, plan, build, check.

03

## Openness

You know where your project stands, including when it slips.

04

## Safety

The safety of our crews and our neighbours comes before the pace of work.

05

## Accountability

What we build carries our liability for ten years. French law requires it; we stand by it.

06

## Respect

For occupants, neighbours, places, and the people who build.

# Six areas of work. From building to civil engineering.

Structural work is our original trade. Around it: all-trades general contracting, technical services and finishing works, and civil engineering crews for earthworks, roads and utility networks.

01 **Structural works and concrete** 08
Our original trade, for private and public buildings.

02 **All-trades general contracting** 09
A turnkey service and one point of contact for the whole operation.

03 **Technical services** 10
Electrical, plumbing and heating work, within the same operation.

04 **Finishing works** 11
Finishing works, through to handover of the building.

05 **Roads and utility networks** 12
From design to completion, with our in-house design office.

06 **Earthworks and asbestos removal** 13
Preparing the ground, cleaning up what is already there.

Your project does not fit a box? Describe it to us. If it is outside our trade, we will tell you so.

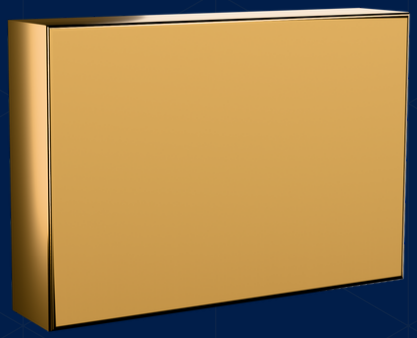

01 / 06

# Structural works and concrete

## Our original trade, for private and public buildings.

WHAT WE DO

1. Reinforced concrete, stone masonry, concrete blocks, brick
2. New builds, extensions, foundations, added storeys
3. Rehabilitation and renovation
4. Industry, retail, offices, care homes, schools, housing, civil engineering

02 / 06

# All-trades general contracting

## A turnkey service and one point of contact for the whole operation.

WHAT WE DO

1. General building contractor, for new builds or renovation
2. Our own resources for studies, design and construction
3. A network of trusted partner firms
4. For private individuals, public bodies and businesses

03 / 06

# Technical services

Electrical, plumbing and heating work, within the same operation.

WHAT WE DO

1 Electrical work

2 Plumbing

3 Heating

04 / 06

# Finishing works

## Finishing works, through to handover of the building.

WHAT WE DO

1. For new builds and renovations
2. As part of an all-trades service
3. Through to handover, turnkey

05 / 06

# Roads and utility networks

## From design to completion, with our in-house design office.

WHAT WE DO

1. Road construction and roadways
2. Utility networks and drainage (VRD)
3. Road equipment and urban development
4. In-house design office

06 / 06

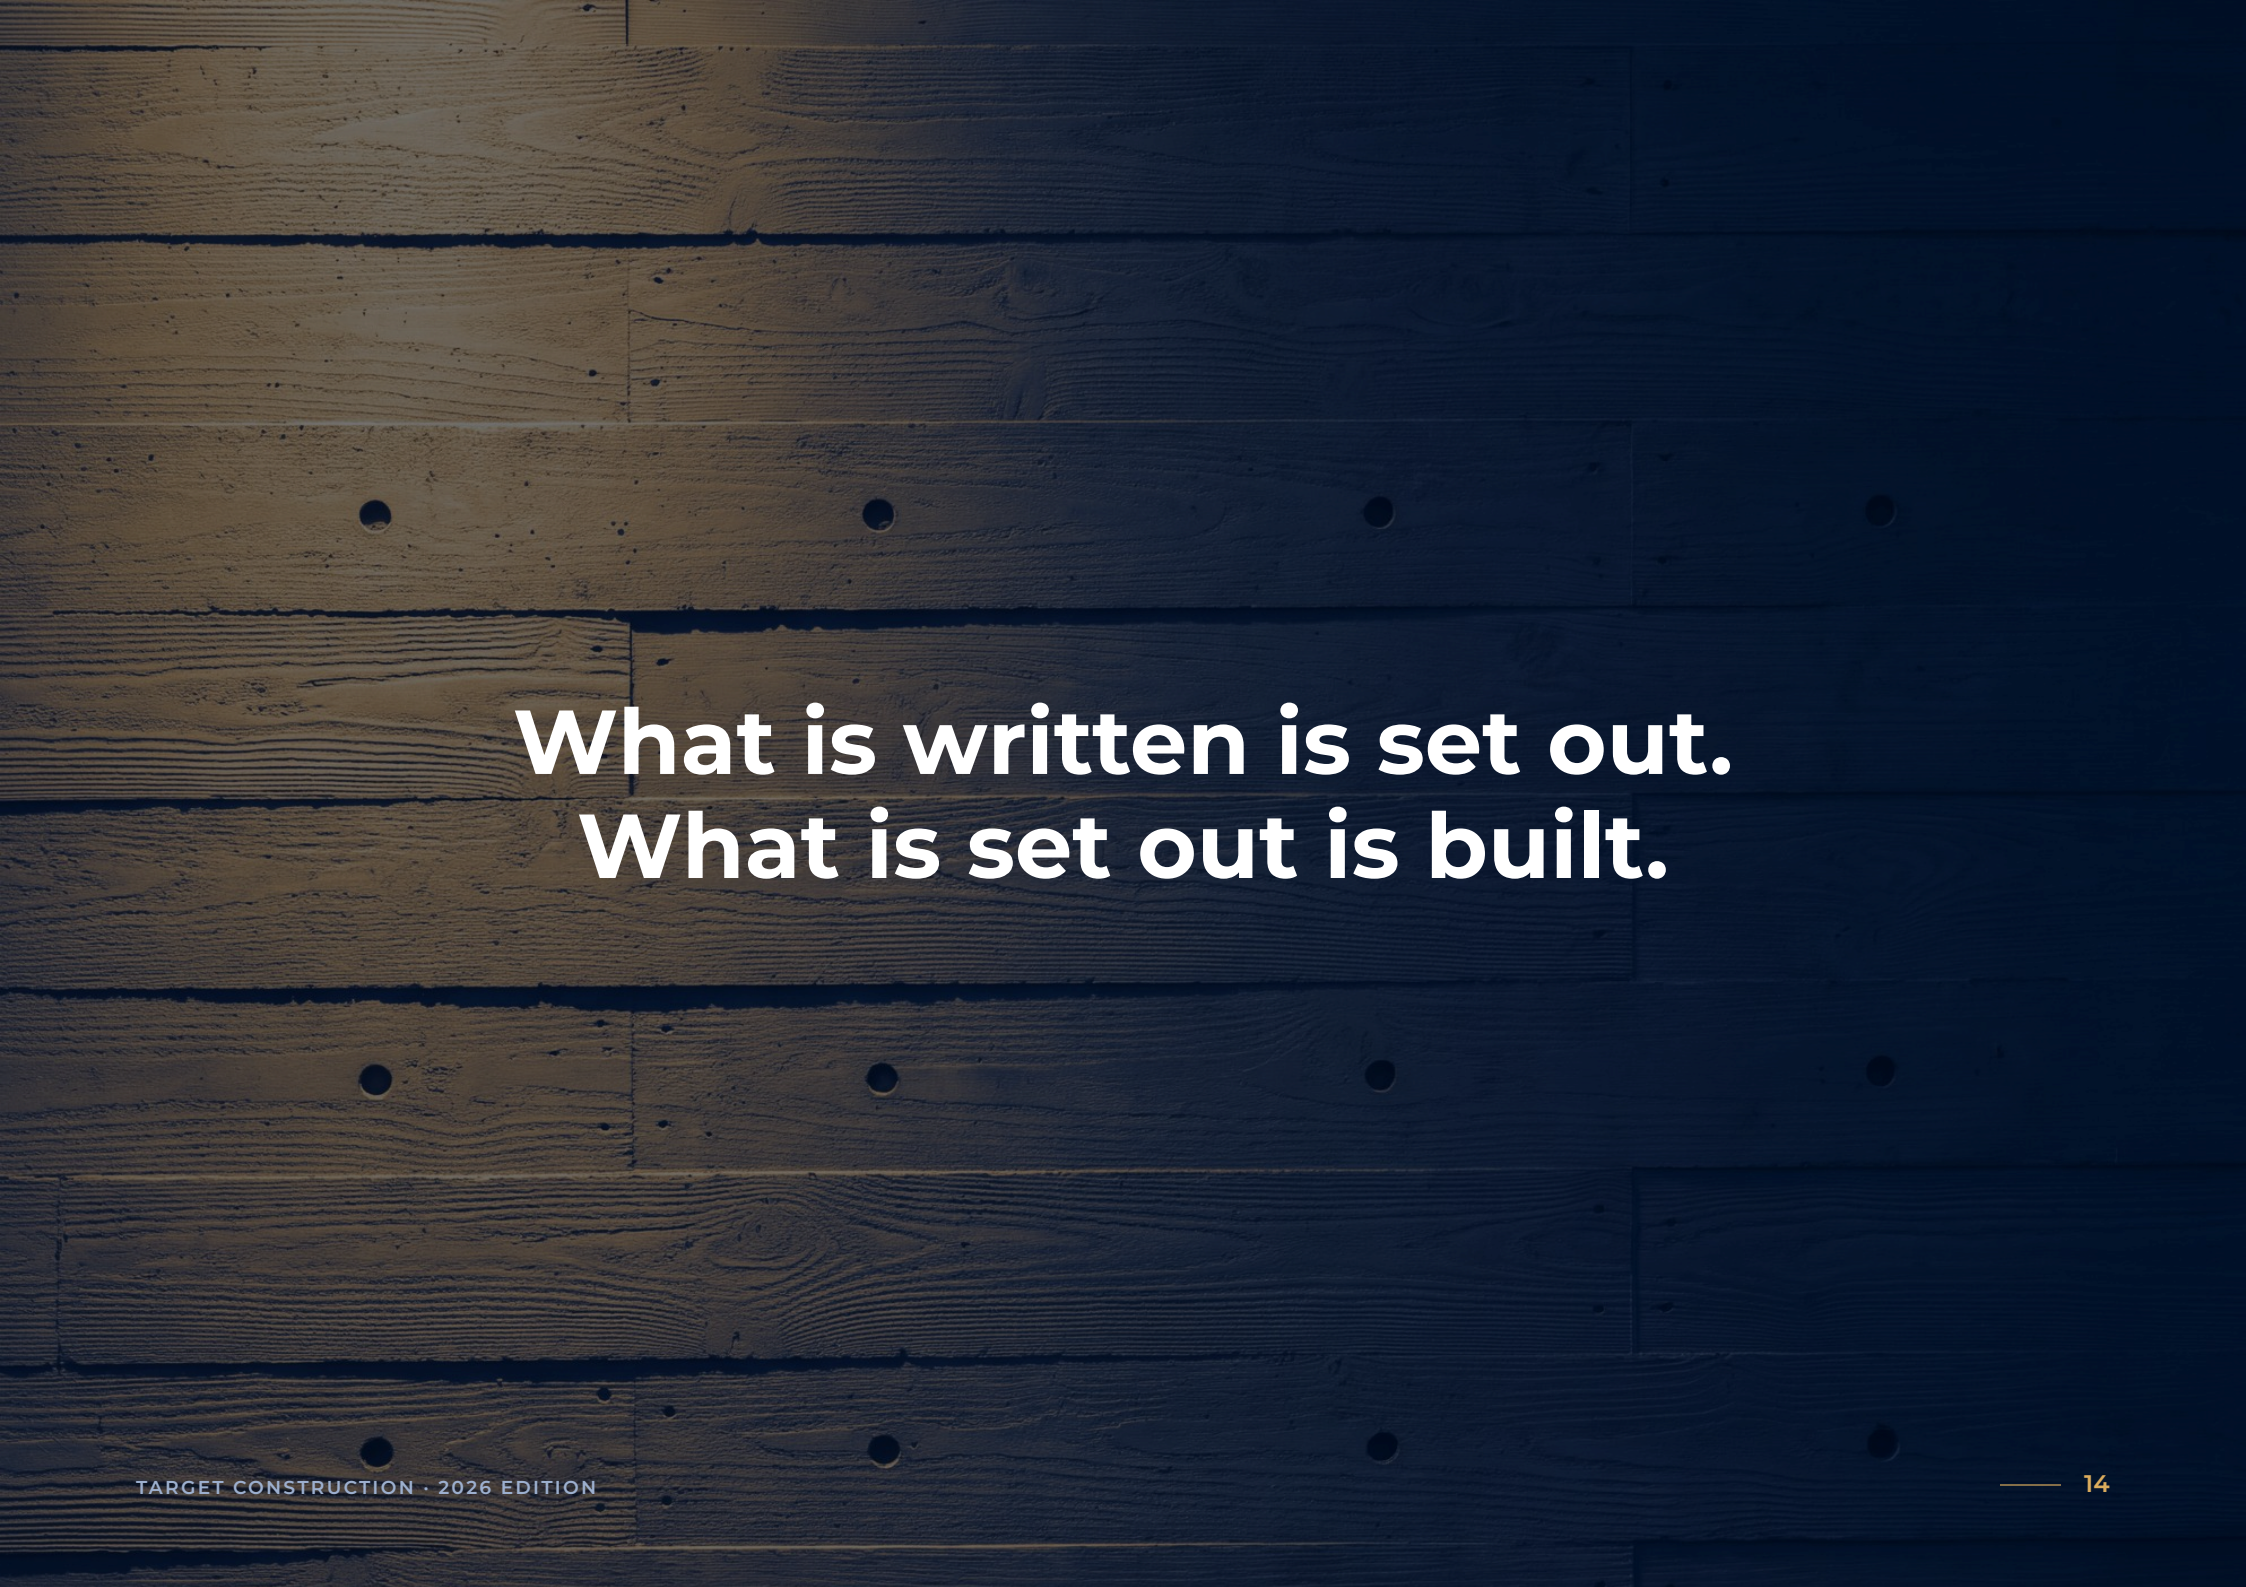

# Earthworks and asbestos removal

Preparing the ground, cleaning up what is already there.

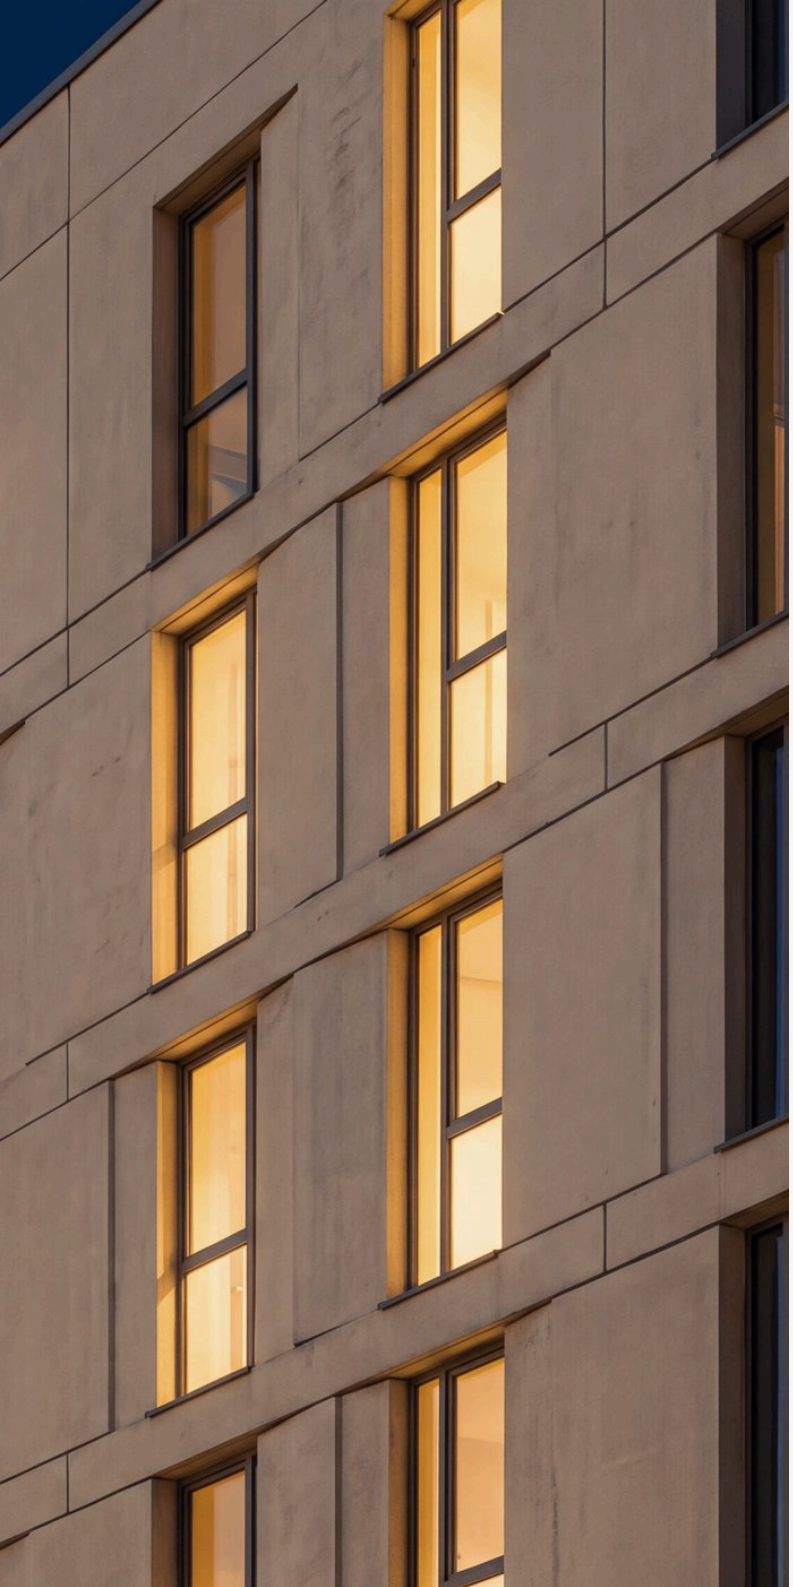

WHAT WE DO

1. Earthworks for commercial and residential buildings
2. Drainage
3. Asbestos removal

**What is written is set out.**
**What is set out is built.**

# Six areas of expertise.

From logistics buildings to roads: the areas in which Target has built up its know-how.

01 **Logistics**

WHAT WE DO

Logistics platforms and warehouses: XXL, high-bay, multi-level or automated buildings.

02 **Industry**

WHAT WE DO

Building, reorganising or rehabilitating factories, laboratories, R&D centres and production units, while optimising flows.

03 **Car parks**

WHAT WE DO

Car parks built with a fully prefabricated modular construction system.

04 **Roads**

WHAT WE DO

Road equipment, utility networks, roadways and urban development.

05 **Offices and services**

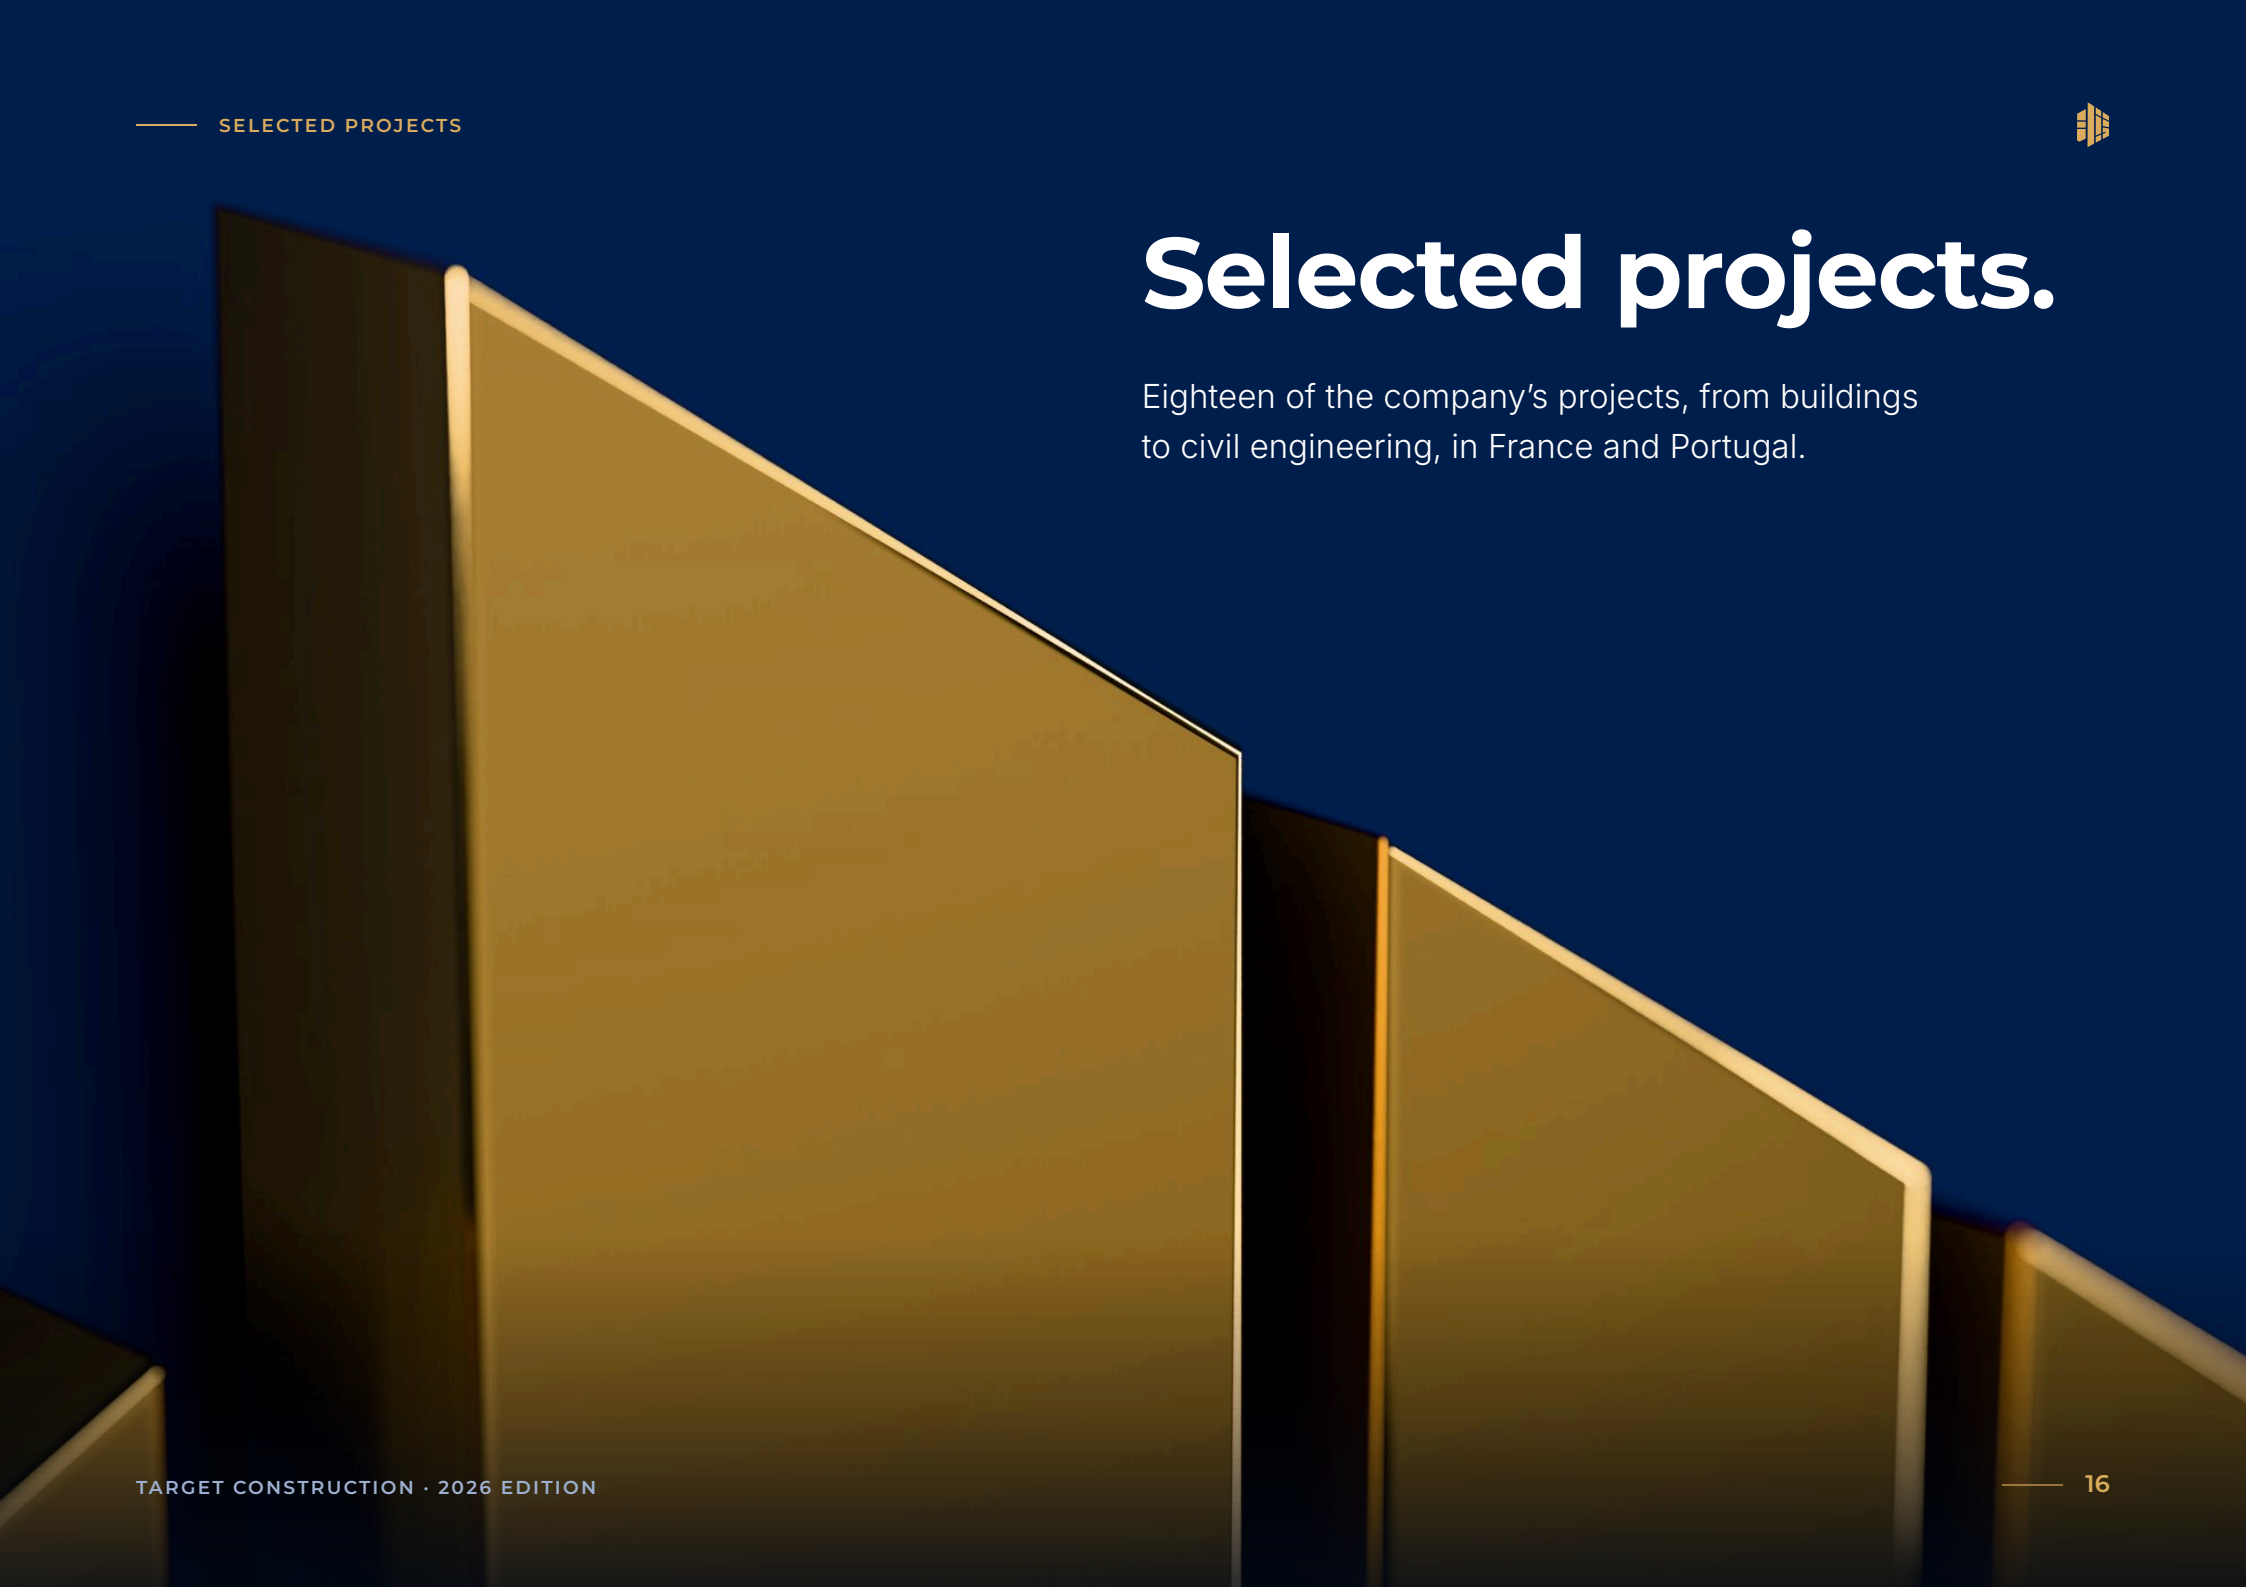

WHAT WE DO

Offices, business premises, services, leisure: turnkey solutions that pay attention to users' comfort.

06 **Housing**

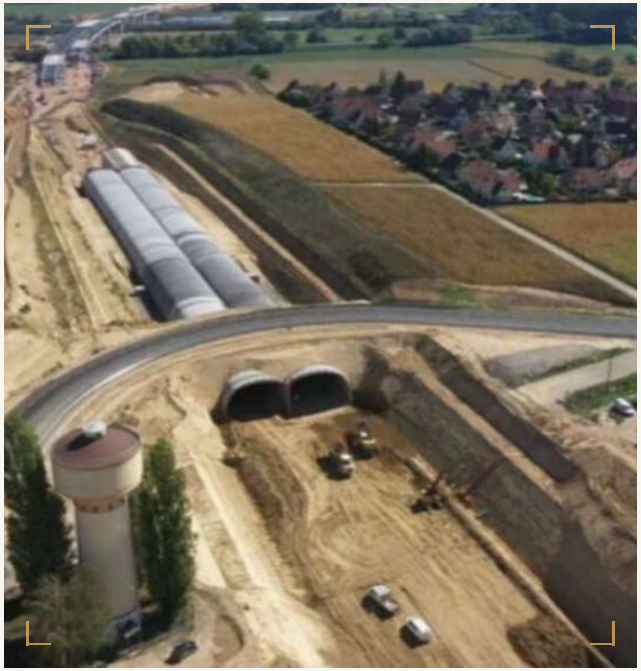

WHAT WE DO

Apartment buildings and houses, for private developers and social housing alike, from construction to handover.

# Selected projects.

Eighteen of the company’s projects, from buildings to civil engineering, in France and Portugal.

01 MOTORWAY BYPASS

## Strasbourg bypass

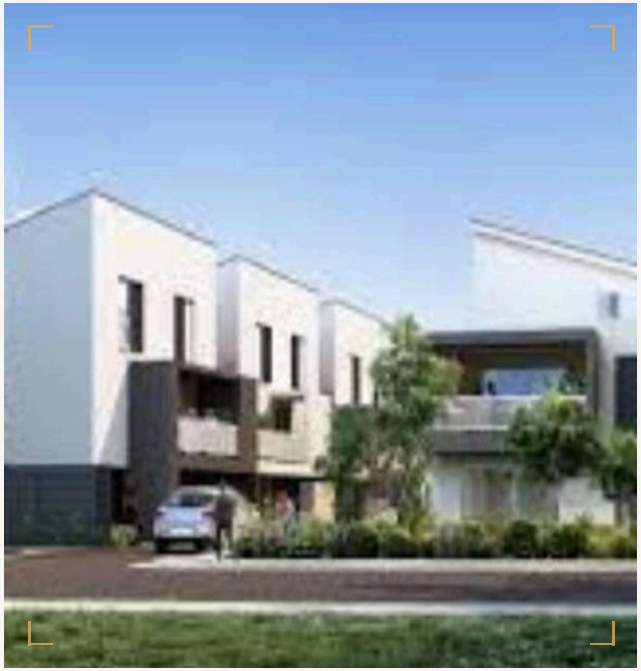

| | |
|---|---|
| LOCATION | Strasbourg |
| OUR SCOPE | Technical services · roads and networks |

02 BUILDING

## Cœur St Max 3

| | |
|---|---|

13 BUILDING

## Green Lorf

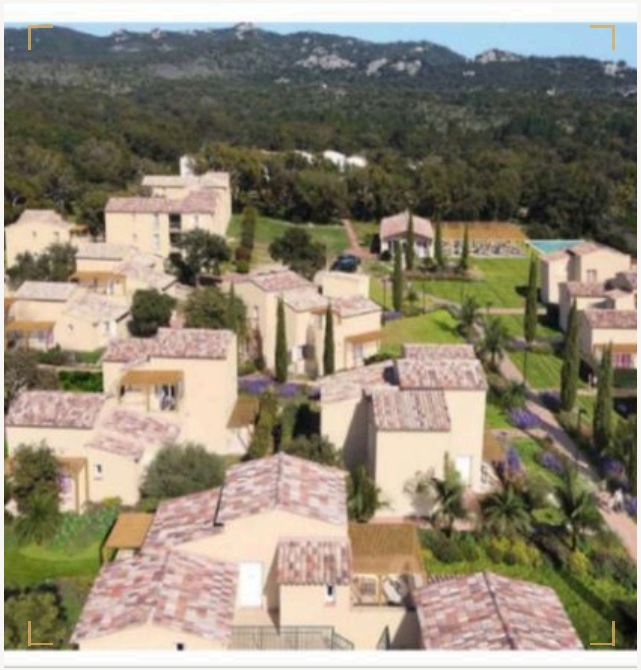

| | |
|---|---|
| LOCATION | La Londe |
| OUR SCOPE | Structural works · finishing |

14 ARTIFICIAL WAVE

## Lisbon artificial wave

| | |
|---|---|
| LOCATION | Lisbon, Portugal |
| OUR SCOPE | Structural works · technical services · finishing · roads and networks |

15 VILLAGE, HOUSING AND INFRASTRUCTURE

## A new village

| | |
|---|---|
| LOCATION | Corse-du-Sud, Corsica |
| OUR SCOPE | Structural works · technical services · roads and networks |

16 URBAN DEVELOPMENT

## Carnoux squares

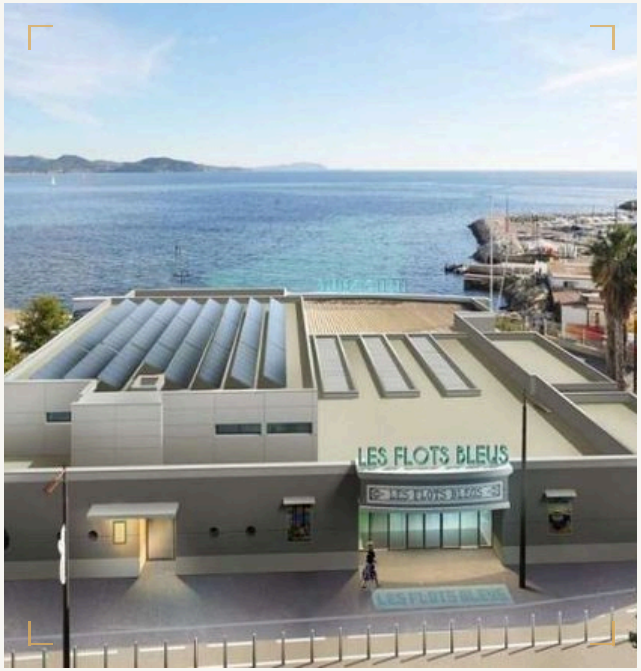

| | |
|---|---|
| LOCATION | Carnoux-en-Provence |
| OUR SCOPE | Structural works · technical services · roads and networks |

17 ROAD WORKS

## Route de Toulouse

| | |
|---|---|
| LOCATION | Haute-Garonne |
| OUR SCOPE | Roads and networks |

18 SHOPPING CENTRE

## Les Flots Bleus

| | |
|---|---|
| LOCATION | La Ciotat |
| OUR SCOPE | Structural works · finishing · roads and networks |

# Four steps. One target.

Every project follows the same path, whatever its size.

01

## Set the target

We study the brief, the site and the drawings with you. We write down the scope, the budget and the programme: the target we share.

02

## Prepare

Our engineering and methods office prepares the works: phasing, procurement, site set-up, safety plan.

03

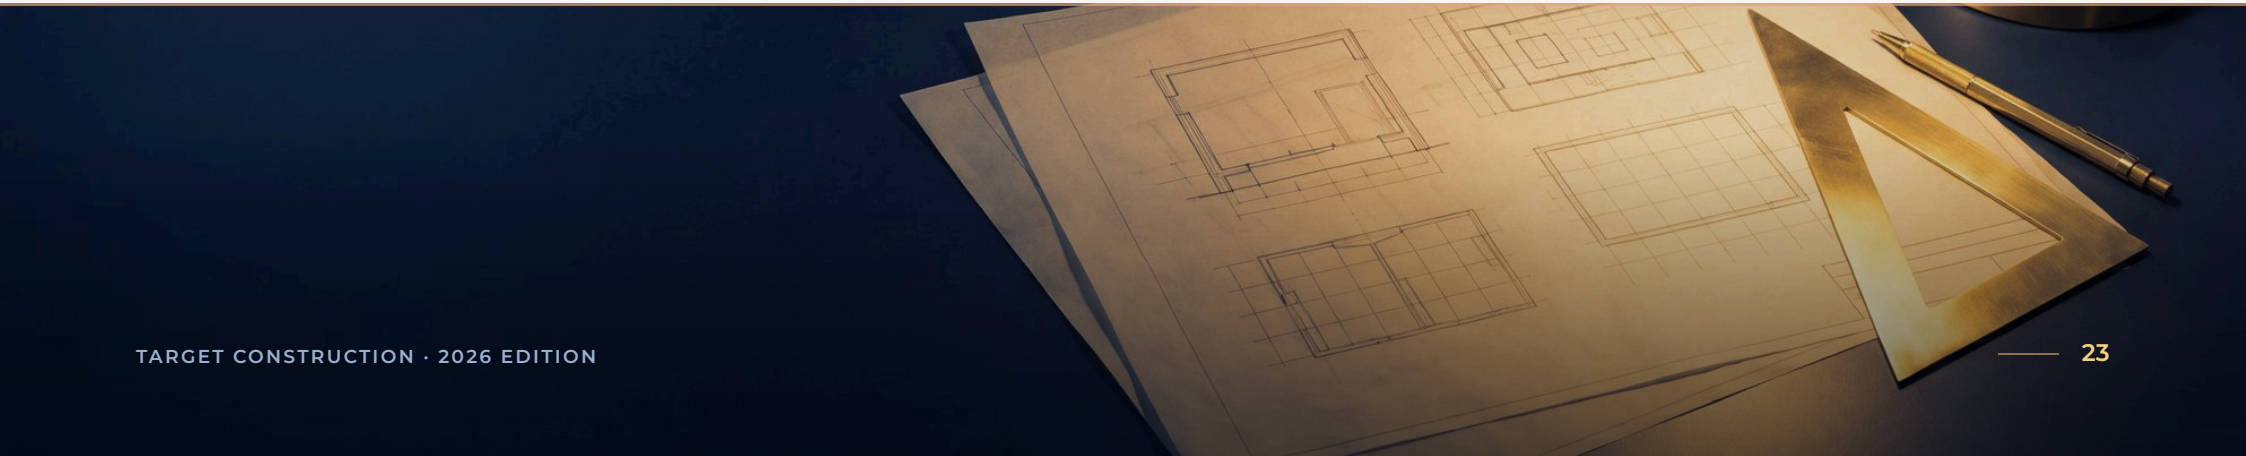

## Build

Our crews carry out the structural works; the project manager coordinates the other packages and tells you what is moving, what is stuck and what comes next.

04

## Hand over

We walk the building with you, list the snags and clear them. Handover starts the warranties French law provides: one-year completion, two-year equipment and ten-year structural.

# Building true means building safe.

Three requirements we do not trade away, and the certificates that prove them.

01

## Quality

Work carried out to the drawings, to the standards of the trade and to the applicable French technical standards (DTU). Self-checks at every stage; snags tracked until they are cleared.

02

## Safety

A site safety plan (PPSPS) wherever one is required, a safety induction for everyone on site, a site kept tidy and marked out. Safety comes before speed.

03

## Environment

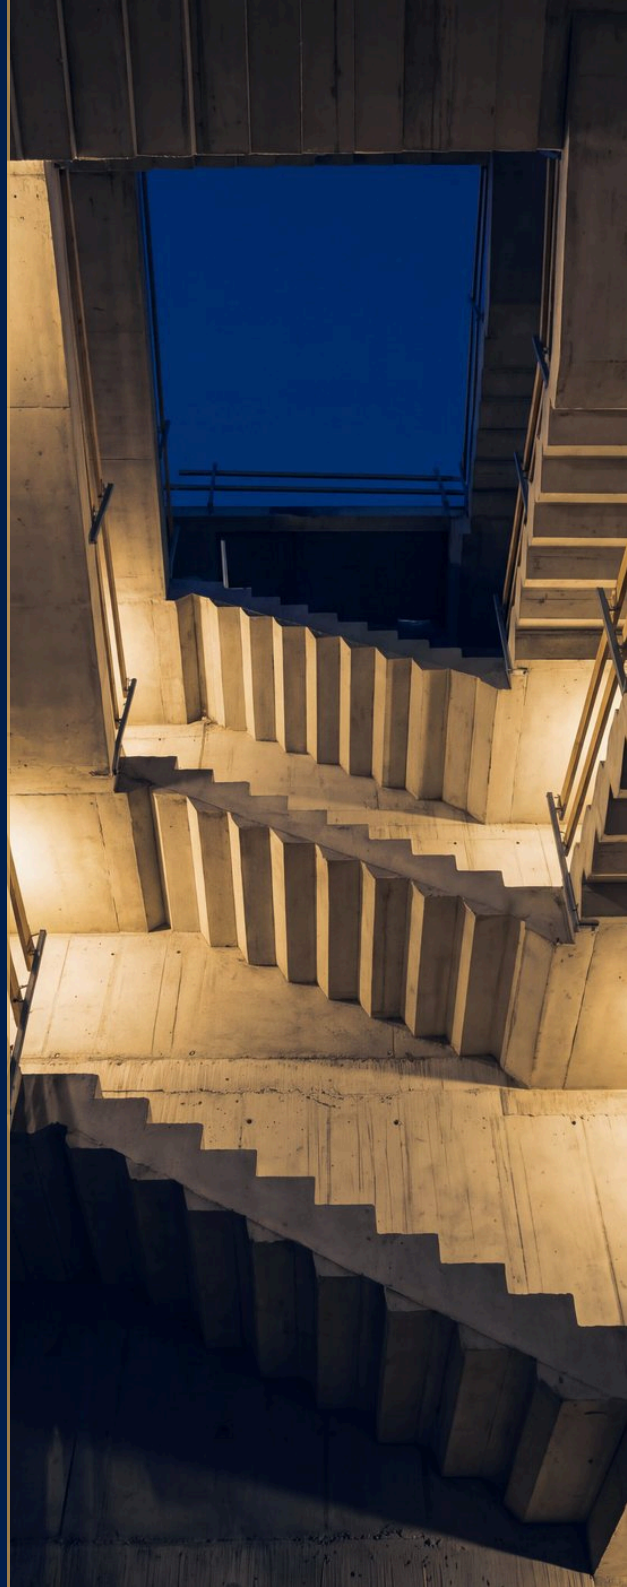

Site waste sorted, and disruption to neighbours kept in check. New buildings follow RE2020, France's environmental regulation; our renovation work is designed to reduce the energy needs of existing buildings.

INSURANCE AND QUALIFICATIONS

| | | |
|---|---|---|
| **Ten-year liability (décennale) and professional liability insurance** | Compulsory for every builder in France (Spinetta Act). | Insurer and policy number: to be supplied |
| **Certifications and approvals** | Target Construction's teams hold certifications and approvals and take part in regular training. | List to be supplied |

Ask for our certificates before you sign: it is your right.

# Six reasons to entrust us with your project.

## 01 Structural work, our original trade

Reinforced concrete, stone, concrete blocks, brick: the structure of your building is the work we started with.

PROOF **New build, extension, added storeys, rehabilitation**

## 02 One point of contact

An all-trades, turnkey service for the whole operation, for new builds and renovations alike.

PROOF **General building contractor**

## 03 In-house studies and design

Our own resources for studies, design and construction, and an in-house design office for civil engineering.

PROOF **From design to completion**

## 04 Building and civil engineering

From buildings to roads: earthworks, roadways, utility networks, drainage and asbestos removal.

PROOF **Three trades, one company**

## 05 Qualified crews

Qualified staff, a complete equipment fleet, certifications and approvals, and regular training, including safety training.

PROOF **Regular safety training**

## 06 Projects of every size

Buildings, hotels, a shopping centre, a car park, a motorway interchange, an artificial wave: work in France and Portugal.

PROOF **18 projects in this document**

# Qualified crews. A complete equipment fleet.

Qualified staff, certifications and approvals, regular training, including safety training, and an in-house design office for civil engineering.

**On every site, a named project manager and site supervisor from the first day.**

| 01 | 02 | 03 | 04 | 05 | 06 |
|---|---|---|---|---|---|
| **Management** | **Engineering and methods office** | **Project managers** | **Site supervisors and skilled trades** | **Quality, safety and environment** | **Administration and procurement** |
| Sets priorities, signs off commitments and answers for every site. | Studies the drawings, prices the work, plans the phasing and the methods. | Run each site, coordinate the packages and report to the client. | Organise the site day to day and carry out the structural works. | Prepare safety plans, check the work, track snags and site waste. | Handle contracts, purchasing and invoicing. |

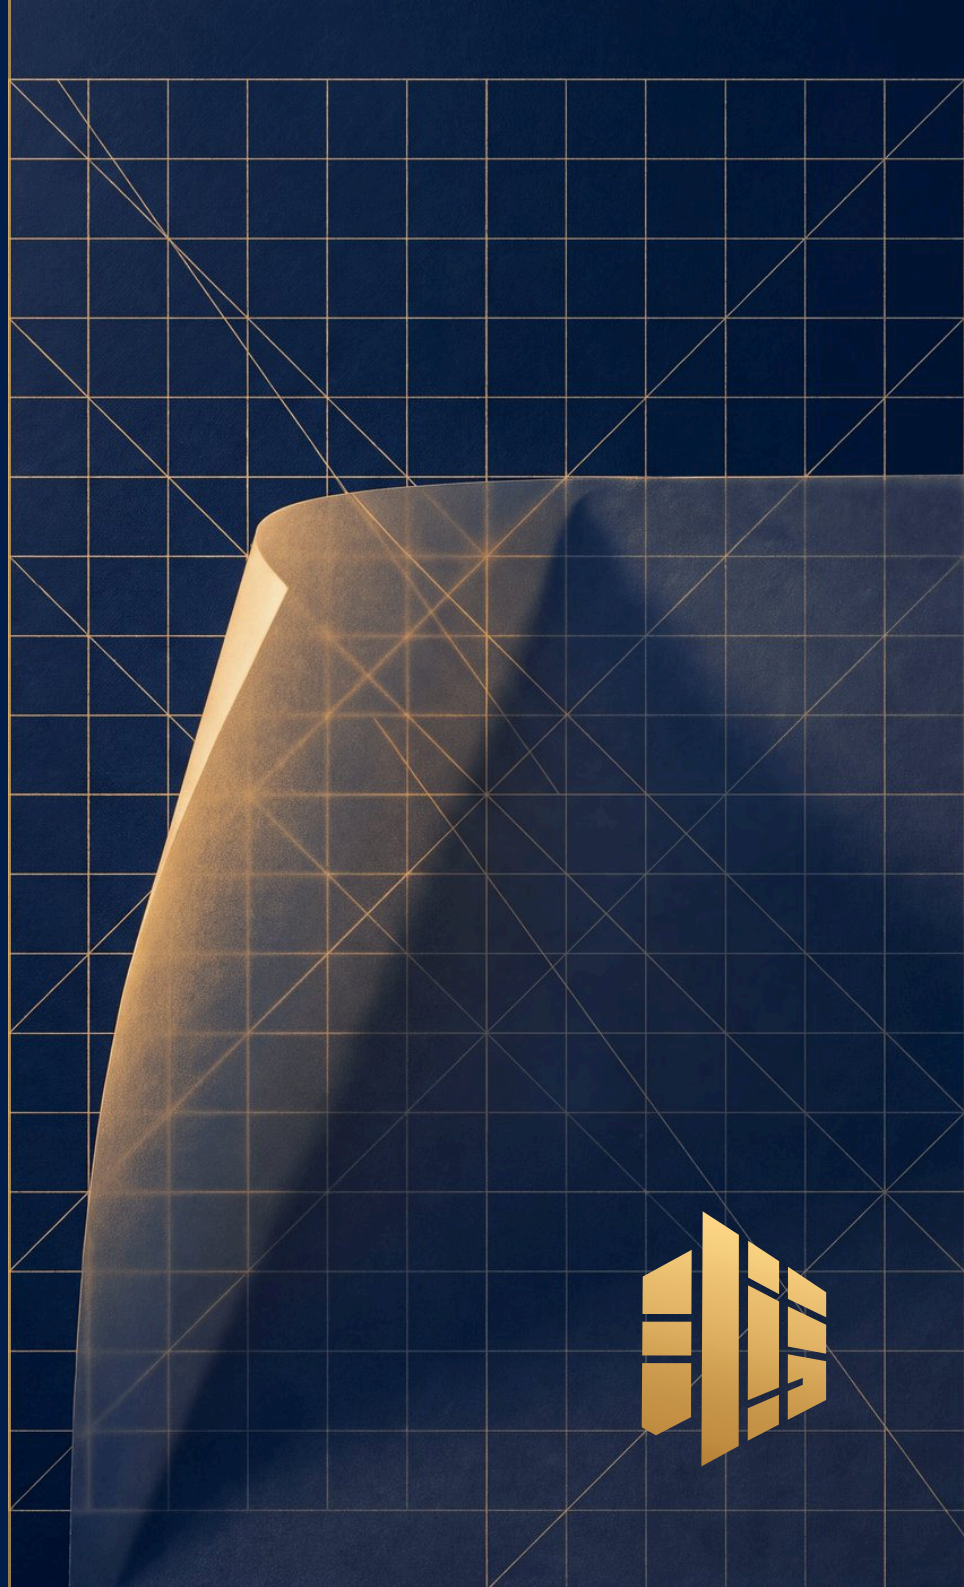

# Start with the target.

A plot, a building, a brief or a simple question: one conversation is enough to know whether we can help.
